

*Cordes Infant Testing Lab, Boston College Department of Psychology*

Sara Cordes' research centers on understanding how infants, children and adults keep track of quantity – how humans process number, time and amount.

Our spatially efficient design for Professor Cordes' psychology lab suite included a waiting area for subjects, two acoustically isolated testing rooms, a control room for monitoring, a shared meeting and work space for graduate students, and a small office – all within 1,100 square feet of space.

*Fall 2009.*
