

These two new labs – a Microbiology Lab and a Molecular Biology Lab for MIT’s Department of Comparative Medicine – included four exhausting biosafety cabinets and a chemical fume hood.

The very short floor-to-deck height necessitated meticulous coordination of new HVAC systems above the ceiling.

The labs also included multiple -20° and -80° freezers, an incubator, a centrifuge, and an anaerobic chamber, as well as desks in each lab for staff.

*Completed Summer 2008.*
